

# CASE STUDY:

## ADI Supports System Integrator to Enhance Interactive Learning in Education

### Project Challenge

An International school in Abu Dhabi were looking at ways to support students with modern learning facilities. The modern challenge of learning is how best to manage the requirements of students based in the classroom environment whilst supporting those students based remotely. For teaching professionals, it is also about utilising technology to provide an interactive learning experience and moving away from more traditional presentation methods. The school had requirements to install large format interactive displays in many classrooms throughout the campus and enlisted the support of systems integrator Genuine IT Systems to source and install the best solution to meet their needs.

### The Solution

Genuine IT Systems identified Clevertouch as the best solution to meet all the requirements and functionality the school required.

Clevertouch's Impact Max and Impact Plus were assessed as what was needed to support the collaborative experience that both teachers and students were looking for. The integrator sourced 35 of the 75" Impact Max and 2 of the 86" Impact Plus interactive displays from ADI Global Distribution, who supported Genuine IT Systems throughout the purchasing and installation process through to aftersales and training support. The interactive displays not only enabled screen sharing and interactive whiteboard functionality but also allow collaboration with students through various features and native Clevertouch apps.

### The Results

The school is now fully equipped with cyber secure classroom technology that empowers teaching professionals to deliver lessons in a more modern way both within and outside the classroom. The ability to facilitate remote learning through a collaborative experience is a successful one and has enabled the school to provide a high-quality service to its students by sharing and engaging in a thoroughly interactive way.

*"Clevertouch products were the perfect solution for this project, easy to install and connect, with 4k displays that have many features that work perfectly in the education sector, and additional technologies to support the environment including motion detectors for power saving."*
