# SMART SECURITY
& HOME AUTOMATION

CREATING MODERN LIVING WITH SMART HOME SOLUTIONS

Become your customers' No. 1 advisor on all things smart home.

Creating modern living with smart home solutions

With the smart home revolution providing homeowners and residents with more products for comfort, security and living cost management ADI looks at the products that help installers stay ahead in the rapidly evolving field of home automation.

Whether customers are looking for a full smart home solution, smart security cameras, comfort solutions like thermostats and lighting control or detectors that can alert remotely to water leaks or smoke, ADI has products to suit all requirements. The ADI team have selected a range of high-quality products that can be added to residential and smart home installs to drive revenue for the installer and give peace of mind to the end-user.

"Product choice and availability is one part of what makes ADI a leading distributor with our smart home offering increasing every month. ADI offers leading brands and product solutions that installers need for their projects. For the smart home sector, we offer everything needed for installers to support their customers with connected products to enhance their home comfort and security."

Simon Allan, ADI UK and Ireland Country Leader

FOR MORE INFORMATION

DTG-PRO
Smart Door and Window Sensor
- Colour, white
- Degree of protection, IP67
- Communication type RF

NDB-PRO
Smart Video Doorbell
- Full HD Camera
- IP44
- Wall Mount

NSA-PRO
Smart Smoke Detector
- Single body of high-quality plastic
- High-performance photoelectric smoke sensor
- Alarm volume: 85 dB

NAV-PRO
Smart Radiator Valve
- Easy installation to Smart Thermostat to control the boiler
- Compatible with Apple, Android, Alexa and Google
- Temperature control optimisation

NIS01-PRO
Smart Indoor Siren
- 110 dB alarm
- Pre-recorded sounds to simulate presence
- Vibration sensor for tamper detection

NSC-PRO
Smart Indoor Camera
- Access from the user's smartphone
- Full HD videos
- 130° field of view

NCO-PRO
Smart Carbon Monoxide Alarm
- Electrochemical carbon monoxide sensor
- Alarm volume: 85 dB

NOC-S-PRO
Smart Outdoor Security Camera
- With people, car and animal detection
- Single piece of durable aluminium shell
- Highly resistant UV protected plastic and glass

NTH-PRO
Smart Thermostat Station
- Works straight out the box as a normal thermostat
- Energy usage and temperature control
- Compatible with Apple, Android, Alexa and Google

RISCO
A LIFETIME OF SECURITY

Grow your business with:

RisControl
Integrated Alarm & Smart Home Controller

Enhanced Security

Convenient Living

Wise Energy Management

RISCO presents a new and unique proposition: a powerful, professional, certified hybrid security solution, fully integrated with smart home and video – RisControl: Controller for Alarm & Smart Automation.

By offering this new advanced solution, installers can now provide their customers with a more comprehensive level of protection and convenience, benefiting from perfect compatibility with hundreds of Z-Wave smart automation devices.

Unleash the power of Z-Wave

RISCO's smart automation solution uses the Z-Wave wireless protocol, which means users can easily connect and control a wide range of devices, from lights and switches to door locks and garage doors, creating a seamless smart security experience.

Lights · Surveillance · Locks · Temperature
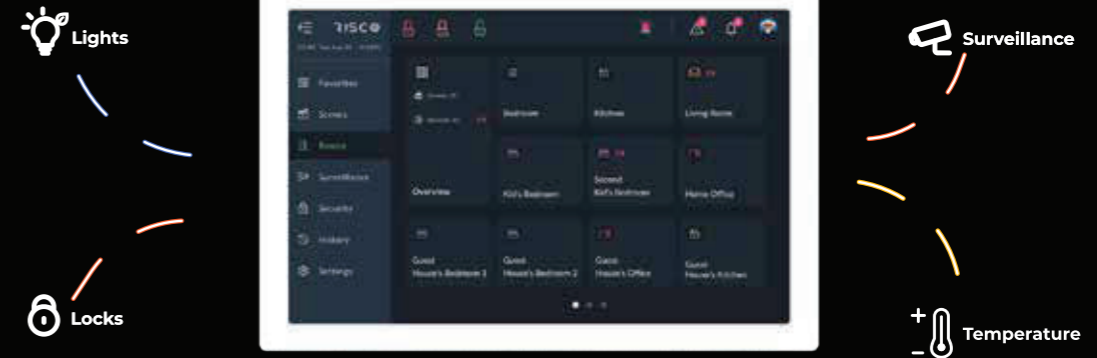

The most powerful hybrid alarm in the market

Safety and Convenience for Homes the Smart Way

With the rise of smart solutions for homes, residential security installers should offer a range of smart home products that enhance the safety, convenience, comfort and overall security of their customers' homes.

Here are some smart home products available to support customers' requirements:

Smart Security and Alarms
Indoor and outdoor security cameras with features including motion detection and night vision can provide real-time recording and alerts of activities around the home. They can enhance security and can deter potential intruders.

Indoor and Outdoor Lighting
Automated lighting systems can give the appearance of home being occupied even when residents are away, deterring intruders. Motion-activated lights can also increase visibility around the property at night and again act as a deterrent.

Video Doorbells
These products enable homeowners to see and communicate with visitors to their door through a smartphone app. Video doorbells offer live video streaming, two-way audio and motion detection, so you can monitor visitors and be alerted to potential intruders.

Locks
Smart locks enable residents to control and monitor their doors remotely and control access to the property. Operated via smartphone apps, key, key fobs or keypad codes they allow access to family members, friends or service providers.

Thermostats
Energy cost and energy efficiency is a great solution to manage the cost of living. Smart thermostats give end users the ability to control their home's temperature remotely, saving energy and enhancing comfort whether you are at home or away.

Carbon Monoxide, Smoke and Heat Detectors
These detectors can not only alert those at home, they can also send alerts to residents when they detect smoke or carbon monoxide, providing an early warning and increasing safety in the home.

Water Leak Detectors
Early detection of water leaks can prevent costly water damage and insurance claims for homes, water leak detectors can alert to leaks and shut off water valves to prevent further damage.

Smart Hubs
For the ultimate management of a smart home solution, a central hub can connect and manage multiple smart devices and allow the end user to control their entire home from a single app. This streamlines the user experience.

Building a smart home solution or adding smart products to a residential install is dependent on what the customer needs and wants. If they are only looking for intruder solutions, then doorbells, locks, cameras and lighting will aid protection; if they are looking for comfort, then heating and lighting controls are great additions. However big or small a home is, smart solutions can add comfort and security and are easy to install and self-manageable for the end user.

FIBARO
a **Nice** company

Z-WAVE Wi Fi zigbee

Experience the real smart home

FIBARO smart home system is a fully wireless solution for people who want to avoid costly renovation work and build their smart home step by step. Wireless Z-Wave network, designed specifically for smart home, used in sensors, modules, switches and other FIBARO smart devices allows convenient remote control of devices in your home, garage and garden.
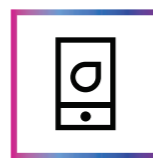

You can easily control your appliances, lighting, roller blinds, temperature, alarm, surveillance or watering system. FIBARO is a complementary ecosystem that integrates with devices from other manufacturers.

WIRELESS   **MODULAR**   **REMOTE**   **SAFE**   **COMPLEMENTARY**

FGFS-101

Universal Z-Wave Plus Flood and Temperature Sensor

- Detects presence of water and rapid changes in temperature
- Built-in accelerometer detects tilt of more than 15 degrees
- Sounds siren, flashes LED, and sends alert to network when

FGR-223

Roller Shutter 3, Compatible with Z-Wave or Z-Wave Plus Controller

- Flush-mounted radio module for integration existing installations into a Z-Wave network
- Precise motor positioning
- Energy measurement function

FGWPG-111

Wall Plug with LED Frame, Type G

- Compatible with Z-Wave and Z-Wave+ Controllers
- Supports Z-Wave network Security Modes: S0 with AES-128 encryption and S2 with PRNG-based encryption
- Compatible with type G sockets and plugs

FGT-001 Pack

Heat Controller Starter Pack

- Power supply: 3.7V Li-Poly battery pack (non-replaceable) Charging port: micro-USB
- Charger voltage (not included): 5V DC (±5%)
- Minimum charger current (not included): 0.5A

FGBHCD-001

Wireless Carbon Monoxide Detector

- Compatible with Apple HomeKit technology
- Bluetooth® low energy technology for wireless communication
- Detects tampering when the casing is opened

FGBHT-001

Wireless Thermostat with Bluetooth

- Easy to read interface and easy to add devices
- Preview of the current state of all connected equipment.
- Devices added by the FIBARO app are also visible and supported in the Home app

Connecting Home Automation Systems

The Connected Smart home solution in the modern home

What does a home automation setup consist of?

For a connected system there would typically be a central smart hub that controls and communicates with several smart devices such as smart lights, doorbells, locks, lighting, smart security cameras and indoor and outdoor lighting. Home automation protocol comes with many features – from controlling the temperature to alerting an alarm system. For the end user, the benefits of a home automation system are comfort, security and cost saving through convenient and customer-controlled products which are easy to maintain and use daily.

The most common protocols used in smart homes are Zigbee, Z-Wave and Wi-Fi. Read on to learn about how each standard works and its benefits to keep your customers' smart homes under their control.

Wi-Fi

Wi-Fi is the most common protocol used in households and it only requires an internet router. Wi-Fi networks are easy to install and accessible for homeowners who want to control their smart home devices from their phones or tablets. Luckily, if a device is already Wi-Fi enabled, it can connect to a router. Wi-Fi networks can operate at 2.4GHz or 5GHz and can connect to up to 200 devices within the network. To avoid device interruptions, make sure your customers have a strong and reliable Wi-Fi connection.

Z-Wave

Just like Wi-Fi, Z-Wave is another household favourite when it comes to choosing the best home automation protocols. Z-Wave operates as a mesh network which means it helps smart devices simply talk to each other within its network. Z-Wave uses 908/916MHz radio frequency which can carry signals clearly through walls.

If you decided on Z-Wave, look for a certification labelled "Z-Wave certified." This certification sets forth a strict set of standards for Z-Wave devices which ensures a successful connection between Z-Wave devices and Z-Wave hubs. Z-Wave is designed with 128-bit AES encryption to give your customers an added security net and make it less likely for the entire network to get hacked. The main downside of a Z-Wave network is it can only connect up to 232 devices which is less than the number of devices compared to Zigbee. Z-Wave has a limited range of only up to 80m indoors compared to Zigbee which can reach up to 100m indoors.

Zigbee

Zigbee is another mesh network that is popular among consumers as well. Zigbee is a low-cost, low-power wireless network with a range of up to 100m indoors and can operate at a 2.4GHz radio frequency. This protocol can offer peace of mind due to its built-in high-level security features. Additionally, Zigbee is more reliable in transferring data to and from different devices than its leading competitors. When comparing the two, Zigbee and Z-Wave have some similarities including, having 128-bit AES encryption which is the safest security feature you can use and for being interoperable.

Zigbee achieves interconnectivity with up to 65,000 Zigbee devices. On the other hand, not every Zigbee device is going to work with every Zigbee hub. The reasoning: Not every Zigbee device follows the same standards set by Zigbee's certification which is why it is best to check the product's compatibility list before purchasing a Zigbee network.

Key benefits of home automation

Integrating home automation protocols comes with many key features that could help your customers in the long run.
Saves energy and cost – Some smart devices have a timed sensor that turns on and off whenever someone isn't using it. This helps save energy, which in return, cuts down utility bills.
Safe – Installing a home automation protocol for your customer provides safety. For example, a smart security camera can let your customers know when an intruder is present.
Modern Comfort – There's no secret that the smart home market continues to grow. Home automation brings convenience and peace of mind to residents in their homes and simplifies living.
